*Gait & Posture* 1993; **1**: 237–238

# Gait & Posture

## INDEX: VOLUME 1 1993

### SUBJECT INDEX

afferent input
  Parkinson's disease, stance regulation, compensatory movements, load receptors, 77
angular momentum
  joint moment, metatarsophalangeal joint, normal gait, control, 133
ankle–foot orthoses
  hemiplegic gait, 27
asymmetries
  female gait, force plates, Fourier analysis, 61
  female gait, force plates, body centre of mass, hand-held loads, 153
balance
  initiation, termination, centre of pressure, centre of gravity, 9
  electromyography, postural control, 93
  centre of mass, posture, centre of pressure, 141, 225
bipedalism
  transition, human infants, quadrupedalism, 189
body centre of mass
  female gait, force plates, asymmetries, hand-held loads, 153
cane
  hemiparesis, stroke, 113
centre of gravity
  balance, initiation, termination, centre of pressure, 9
centre of mass
  posture, centre of pressure, balance, 141, 225
centre of pressure
  balance, initiation, termination, centre of gravity, 9
  centre of mass, posture, balance, 141, 225
clinical monitoring
  gait, assessment, kinetic energy, strain energy, 23
compensatory movements
  Parkinson's disease, stance regulation, afferent input, load receptors, 77
control
  joint moment, metatarsophalangeal joint, normal gait, angular momentum, 133
development
  posture, stability, 105
elderly
  postural control, posture, stance, 160
electromyography
  balance, postural control, 93
EMG
  functional evaluation, gait, stair ascent, 35
  human locomotion, visually guided adjustments, observable and inferred properties, obstacles, 45
female gait
  force plates, Fourier analysis, asymmetries, 61
  force plates, body centre of mass, asymmetries, hand-held loads, 153
foot
  locomotion, slope, temporal kinematics, 171
force plates
  female gait, Fourier analysis, asymmetries, 61
  female gait, body centre of mass, asymmetries, hand-held loads, 153
Fourier analysis
  female gait, force plates, asymmetries, 61
functional evaluation
  gait, stair ascent, EMG, 35
gait
  functional evaluation, stair ascent, EMG, 35
gait initiation
  stride rate, steady state, 85
gait symmetry
  hemiplegia, physiotherapy, eurodevelopmental technique (Bobath concept), 165
gait, assessment
  kinetic energy, strain energy, clinical monitoring, 23
hand-held loads
  female gait, force plates, body centre of mass, asymmetries, 153
hemiparesis
  cane, stroke, 113
hemiplegia
  gait symmetry, physiotherapy, neurodevelopmental technique (Bobath concept), 165
hemiplegic gait
  ankle–foot orthoses, 27
human infants
  quadrupedalism, bipedalism, transition, 189
human locomotion
  visually guided adjustments, observable and inferred properties, obstacles, EMG, 45
initiation
  balance, termination, centre of pressure, centre of gravity, 9
joint moment
  metatarsophalangeal joint, normal gait, angular momentum, control, 133
kinetic energy
  gait, assessment, strain energy, clinical monitoring, 23
load receptors
  Parkinson's disease, stance regulation, compensatory movements, afferent input, 77
locomotion
  slope, foot, temporal kinematics, 171
metatarsophalangeal joint
  joint moment, normal gait, angular momentum, control, 133
neurodevelopmental technique (Bobath concept)
  hemiplegia, gait symmetry, physiotherapy, 165
normal gait
  joint moment, metatarsophalangeal joint, angular momentum, control, 133
observable and inferred properties
  human locomotion, visually guided adjustments, obstacles, EMG, 45
obstacles
  human locomotion, visually guided adjustments, observable and inferred properties, EMG, 45
otolith
  vestibulospinal reflex, postural balance, Tullio phenomenon, 145
Parkinson's disease
  stance regulation, compensatory movements, afferent input, load receptors, 77
physiotherapy
  hemiplegia, gait symmetry, neurodevelopmental technique (Bobath concept), 165
postural balance
  otolith, vestibulospinal reflex, Tullio phenomenon, 145
postural control
  balance, electromyography, 93
  posture, stance, elderly, 160
posture
  development, stability, 105
  centre of mass, centre of pressure, balance, 141, 225
  postural control, stance, elderly, 160
quadrupedalism
  bipedalism, transition, human infants, 189
slope
  locomotion, foot, temporal kinematics, 171
stability

posture, development, 105
stair ascent
functional evaluation, gait, EMG, 35
stance
postural control, posture, elderly, 160
stance regulation
Parkinson's disease, compensatory movements, afferent input, load receptors, 77
steady state
gait initiation, stride rate, 85
strain energy
gait, assessment, kinetic energy, clinical monitoring, 23
stride rate
gait initiation, steady state, 85
stroke
cane, hemiparesis, 113
temporal kinematics
locomotion, slope, foot, 171
termination
balance, initiation, centre of pressure, centre of gravity, 9
transition
human infants, quadrupedalism, bipedalism, 189
Tullio phenomenon
otolith, vestibulospinal reflex, postural balance, 145
vestibulospinal reflex
otolith, postural balance, Tullio phenomenon, 145
visually guided adjustments
human locomotion, observable and inferred properties, obstacles, EMG, 45

## AUTHOR INDEX

**Abitbol M,**
Quadrupedalism and the acquisition of bipedalism in human children, 189
**Abulaffio N,** see Dickstein R, 113
**Assaiante Ch,** see Dietz V, 77
**Barr D A,** see Gormley J P, 85
**Bell A J,** see Gormley J P, 85
**Berger W,** see Dietz V, 77
**Besser M P, Kowalk D L and Vaughan C L,**
Mounting and calibration of stairs on piezoelectric force platforms, 231
**Blaszczyk J W, Lowe D L and Hansen P D,**
Age-related changes in perception of support surface inclination during quiet stance, 160
**Blaszczyk J W, Hansen P D and Lowe D L,**
Accuracy of passive ankle joint positioning during quiet stance in young and eldery subjects, 211
**Brandt T,** see Fries W, 145
**Bravo G,** see Moffet H, 35
**Crowe A, Schiereck P, de Boer R and Keessen W,**
Characterization of gait of young adult females by means of body centre of mass oscillations derived from ground reaction forces, 61
**Crowe A, Schiereck P and Keesen W,**
Gait adaptations of young adult females to hand-held loads determined from ground reaction forces, 153
**de Boer R,** see Crowe A, 61
**Dickstein R, Abulaffio N and Pillar T,**
Vertical force loaded on walking canes in hemiparetic patients, 113
**Dieterich M,** see Fries W, 145
**Dietz V, Zijlstra W, Assaiante Ch, Trippel M and Berger W,**
Balance control in Parkinson's disease, 77
**Eng J J and Winter D A,**
Estimations of the horizontal displacement of the total body centre of mass: considerations during standing activities, 141
**Fries W, Dieterich M and Brandt T,**
Otolith contributions to postural control in man: short latency motor responses following sound stimulation in a case of otolithic Tullio phenomenon, 145
**Gilchrist L,** see Jian Y, 9
**Gormley J P, Barr D A, Bell A J, Ravey J and Mollan R A B,**
Examination of the duration of gait initiation by use of an electrogoniometer, 85
**Hansen P D,** see Blaszczyk J W, 160 and 211
**Herzog Th,** see Wessel K, 197
**Hesse S A, Jahnke M T, Schreiner C and Mauritz K-H,**
Gait symmetry and functional walking performance in hemiparetic patients prior to and after a 4-week rehabilitation programme, 165
**Horak F B and Moore S P,**
The effect of prior leaning on human postural responses, 203
**Hreljac A,**
Determinants of the gait transition speed during human locomotion: kinetic factors, 217
**Huss G P,** see Wessel K, 197
**Ishac M G,** see Jian Y, 9
**Jahnke M T,** see Hesse S A, 165
**Jian Y, Winter D A, Ishac M G and Gilchrist L,**
Trajectory of the body COG and COP during initiation and termination of gait, 9
**Jiang P,** see Simpson K J, 171
**Keessen W,** see Crowe A, 61 and 153
**Khodadadeh S,**
Energy methods for the clinical monitoring of pathological gait, 23
**Kowalk D L,** see Besser M P, 231
**Kubota T,** see Yamamoto S, 27
**Lee D,** see Newell K M, 225
**Lowe D L,** see Blaszczyk J W, 160 and 211
**Maki B E and Ostrovski G,**
Scaling of postural responses to transient and continuous perturbations, 93
**Malouin F,** see Moffet H, 35
**Mauritz K-H,** see Hesse S A, 165
**Miyazaki S,** See Yamamoto S, 27
**Miyazaki S and Yamamoto S,**
Moment acting at the metatarsophalangeal joints during normal barefooted level walking, 133
**Moffet H, Richards C L, Malouin F and Bravo G,**
Load-carrying during stair ascent: a demanding functional test, 35
**Mollan R A B,** see Gormley J P, 85
**Moore S P,** see Horak F B, 203
**Newell K M, van Emmerik REA, Lee D and Sprague R L,**
On postural stability and variability, 225
**Odum S,** see Simpson K J, 171
**Ostrovski G,** see Maki B E, 93
**Patla A E and Rietdyk S,**
Visual control of limb trajectory over obstacles during locomotion: effect of obstacle height and width, 45
**Pillar T,** see Dickstein R, 113
**Ravey J,** see Gormley J P, 85
**Reeves K T,** see Simpson K J, 171
**Riach C L and Starkes J L,**
Stability limits of quiet standing postural control in children and adults, 105
**Richards C L,** see Moffet H, 35
**Rietdyk S,** see Patla A E, 45
**Schiereck P,** see Crowe A, 61, 153
**Schimrigk K,** see Wessel K, 197
**Schreiner C,** see Hesse S A, 165
**Shewokis P A,** see Simpson K J, 171
**Simpson K J, Jiang P, Shewokis P A, Odum S and Reeves K T,**
Kinematic and plantar pressure adjustments to downhill gradients during gait, 171
**Sprague R L,** see Newell K M, 225
**Starkes J L,** see Riach C L, 105
**Trippel M,** see Dietz V, 77
**van Emmerik R E A,** see Newell K M, 225
**Vaughan C L,** see Besser M P, 231
**Wessel K, Wittkämper A, Herzog Th., Huss G P and Schimrigk K,**
No effect of L-5-hydroxytryptophan on ataxia of stance: posturographic findings, 197
**Winter D A,** see Jian Y, 9
**Winter D A,** see Eng J J, 141
**Wittkamper A,** see Wessel K, 197
**Yamamoto S,** see Miyazaki S, 133
**Yamamoto S, Miyazaki S and Kubota T,**
Quantification of the effect of the mechanical property of ankle-foot orthoses on hemiplegic gait, 27
**Zijlstra W,** see Dietz V, 77
